

Problem identification and solution package

Renowned for its leadership in performance barrier fabrics Edmund Bell now offers, for the first time, superb protection against the potentially harmful effects of microwave radiation from wireless devices.

ChromaxEMF is a new type of fabric. It has special metallic threads woven into the yarn. It is capable of deflecting as much as 99% of Electrosmog across the full spectrum of wireless communications emissions.

A white polyester-based sheer fabric with an open construction established to protect against a wide range of radiation frequencies, Chromax EMF is:

- Highly transparent
- Light
- Breathable
- Washable
- 2.6 metres wide
- Easycare

Stylish and effective as a net curtain or as curtain linings and interlinings

The shielding properties of ChromaxEMF are effectively demonstrated by the Electrosmog Detector, the essential tool in gaining a better understanding of this unseen peril.

Ideal for bedrooms and all other rooms where people spend significant parts of their working or leisure day, Chromax EMF ensures vital protection in the wireless world.

Superb protection against microwave radiation from wireless devices

Identify the problem with the Electromog Detector - and then solve it!

As debate over the siting of mobile phone masts intensifies...

As local community groups get ever more vocal in their objections to masts...

As installations are getting ever closer to homes, hospitals, workplaces and schools...

...evidence is growing that more and more people are becoming sick from exposure to too much wireless radiation

('Electrosmog')... from wireless devices such as:

- Cordless phones
- Cordless baby alarms/monitors
- Mobile/cellular phone masts/towers/transmitters
- Mobile/cellular phones
- Wireless networks

Crucially, it has been proven that the majority of externally sourced Electrosmog penetrates a typical room through its windows.

Ofcom is the independent regulator and competition authority for the UK communications industries. Its "Sitefinder" website will help you to see the scale of the mobile phone mast problem in your area using a postcode search at

www.sitefinder.radio.gov.uk

The UK Government was sufficiently concerned about this issue to establish an independent expert group to assess this problem. This resulted in the Stewart Report, about which you can learn more at via the same site.

Currently irreversible, the debilitating condition known as Electrosensitivity is appearing among young and old alike, all over the country with these typical symptoms:

- Headaches
- Sleep disruption
- Chronic fatigue
- Depression
- Hypersensitivity and erratic blood pressure
- Skin complaints
- Behavioural patterns in children

Left unchecked things can only get worse, yet people who are suffering often don't realise that it is too much Electrosmog that is the cause of their complaint.

We all know that a good night's sleep is one of the most important factors in maintaining good health. So we say ... keep Electrosmog out of your rooms by identifying the presence of radiation with our detector and effectively shielding windows with Chromax EMF.

Renowned for its leadership in performance barrier fabrics Edmund Bell now offers, for the first time, superb protection against the potentially harmful effects of microwave radiation from wireless devices.
